

## **Luminys Systems Corp. Introduces Lighting Systems for Automotive Testing at Crash Test Expo 2006**

*October 18, 2006, Los Angeles* – Luminys Systems Corp., designer and manufacturer of award-winning high-intensity lighting systems for motion picture, television and event production, automotive testing, high-speed photography, and other professional and industrial applications, announced today that will introduce full line of lighting products for automotive testing applications at Crash Test Expo 2006.

The company's proprietary technology offers several features to improve performance for automotive testing. Its fixtures can generate up to an astonishing 500,000 watts of light with a wide area of illumination that can reduce shadows, glare and hot spots. Its high-quality, flicker-free light (5400° Kelvin, 96+ CRI) significantly improves image capture. Instant-on, dimmability and idle levels can reduce heat and control power consumption.

Luminys will introduce three product lines for automotive testing:

- MiniHiG™ system for onboard applications, producing up to 1600 watts of light from a light-weight, small footprint, tested up to 100G;
- LabLight™ system for laboratory environments, offering one 30K fixture of two 15K fixtures in an interchangeable modular configuration; and
- Gantry installations, offering up to 500,000 watts per fixture with virtually no warm-up time and with battery power stations to reduce house power requirements.

Bob Fiorentino, VP of Sales and Marketing for Luminys, said “for too long lighting has been the ‘weak link’ that limited performance in testing applications. Our technology, which for nearly 20 years has set the standard for high-performance illumination for movie and television production, will finally allow the critical components of automotive testing to operate at their full potential.”

Luminys will debut its MiniHiG™, LabLight™ and gantry products at booth C204 at Crash Test Expo 2006 October 25-27 in Novi, Michigan.

### *About Luminys Systems Corp.*

*Luminys™ (previous named Lightning Strikes Inc.) is the premier provider of highly-controllable, high quality light sources for professional and industrial use. The Company's products offer the highest light output commercially available from a single source and provide an ideal replication of natural sunlight. Its Softsun® and Lightning Strikes® products have been used in the production of thousands of feature films, television series, and commercials over the last two decades, as well as numerous*

*sporting events, concerts, and other live events. It has garnered two Technical Achievement Awards from the Academy of Motion Picture Arts and Sciences and an Emmy from the Academy of Television Arts and Sciences. Luminys is a subsidiary of Imagility Inc. [www.luminyscorp.com](http://www.luminyscorp.com)*
